EAM2000

RFI have released a new GSM antenna module ideal for embedding into M2M applications. The EAM2000 embedded antenna module is a dual band GSM antenna designed specifically for OEM project applications requiring a covert antenna. Its unobtrusive design makes it ideal for retrofitting or OEM integration.

Being a ground plane insensitive antenna the EAM2000 becomes the right choice for difficult mounting positions. This unit can also be used alongside GPS applications as part of a telematics package.

RF Industries (RFI) is an Australian Manufacturer and distributor of wireless infrastructure products and systems.

RFI also delivers top class engineering & design solutions for wireless fixed and mobile applications.
